

GreenGrade® UPSKILL

Message from Managing Director

“We firmly believe in the transformational power of technology as a force for good. The right tools at the right time could leapfrog the human capital in emerging economies, enriching people and providing them with essential, and possibly even life-saving skills and know-how. UpSkill is a testament to that. We have developed a cutting edge technology which conveys a whole new level of captivating learning directly to the factory, bridging the digital divide to an extent not seen in Bangladesh before”.

- Dr. Sharon Sadeh
MD, GreenGrade
Solutions Ltd

Thank You for your support

On 19th of August 2014,
GreenGrade launched its
UpSkill pilot programme.

We were very happy to have
with us Maria Low, Garment
Sector Lead, Department for
International Development
(DFID), Bangladesh,
representatives of BGMEA and

several factories, retailers and
suppliers. Our UpSkill
Bangladesh team was
successful in demonstrating the
product and attending to every
clarification raised by our
guests. The presentation was
mainly aimed at the pilot
factory participants to explain
the simple steps to complete

the independent study
being conducted by our
research partner,
Stockholm Environment
Institute, University of
York. We now look
forward to the completion
of our pilot. Thanks to our
partners and participants
for their support.

UpSkill is developed with the latest technology that transforms work safety and ethics in Bangladesh with an e-Learning Mobile App. The platform is available on a low-cost tablet device. The tablets are supplied to us by Symphony a leading brand of Bangladesh. The photographs shows Soltech our software developer and Symphony representative demonstrating the system to Maria Low of DFID.

We must take this opportunity to thank BGMEA for attending the event and extending their support to our programme (picture on the right).

Finally this event would not have been possible without GreenGrade Bangladesh and UpSkill Bangladesh team (picture below).

“There are world class garment factories in Bangladesh, but we need to bring all factories up to this standard. Supporting UpSkill is part of our efforts to help improve safety and working conditions in the industry. The beauty of this project is how it uses tablets and other readily available technology to reach those who need the training and present them neatly with important information about labour and safety standards, and how to apply these in their factories.”

- Sarah Cook
DFID Country Representative for Bangladesh
